

Spreader Rack

East Brandywine Township, Chester County

Problem/Challenge Addressed

The spreaders for the trucks were always on the floor taking up space, and if we needed to move them, we had to hook up a chain with the backhoe. It also took two people and a backhoe to mount the spreaders onto the trucks.

Method/Process/Product to Resolve Challenge

The road department devised a portable storage rack for the spreaders. In addition to storing the spreaders, the spreaders can now be moved throughout the building and even outside to a lift for truck mounting. The only cost to us were the wheels and bolts for \$50.

Results/Key Takeaways

This saves us time because now only one person is needed to install and move the spreaders from the trucks. Plus, we don't need any additional equipment.
