

Receiving Material/Material Storage Buildings

PennDOT Engineering District 4-0

Buildings Sustained Damage During Salt Deliveries

District 4 had several salt buildings damaged by vendor trucks raising their beds in our salt storage buildings. When this happens, we must close the building until repairs can be designed, sealed, permitted and completed.

Method/Process/Product to Resolve Challenge

All salt deliveries will be dumped at the entrance of our buildings, and the salt will be pushed in with a loader. An employee must be present when trucks are dumping to ensure there is no damage and also visually check the quality of the salt. (Issued as DMC 19-17)

Results/Key Takeaways

Saves time and costs by reducing the likelihood of building damage.
