

PROJECT DESCRIPTION:

Bridge interim repairs are needed to fix bridge beams and strengthen select columns to avoid future degradation and potentially a bridge closure. These repairs will not eliminate the current 10-ton weight restriction posting, which will remain in place until a future and more extensive bridge repair project is completed.

TRAFFIC CONTROL:

Vehicles, bikes, and pedestrians, currently not restricted from using the bridge, will be maintained throughout the construction period. Longer term work zones involving minor lane shifts or flagging for short term operations should be expected during the construction period.

Boaters can avoid the identified under-bridge work locations by following signing to be placed on the side of the bridge.

SCHEDULE:

Construction work is anticipated between April and September 2024.
